# HestiaCP

Hestia Control Panel is an open source server management software. Fast, reliable, modern – everything you wanted can now be installed with one command.

To access the HestiaCP control panel, enter the address from which the panel will be accessible in the address bar of your browser, and then enter your login and password in the appropriate fields. All this data will be sent to your email after installing the operating system and the control panel (to do this, check the "Hestia control panel" box on the OS selection page). Access data comes in this form (example):

> **Access data for HestiaCP:**
>
> **URL:** https://192.168.0.10:8083/login/
> **Username:** admin
> **Password:** WiNUH28A

Quick and easy to learn how to work

Hestia is made with ease of use in mind. Creating a user or website is as easy as clicking a button and filling in a couple of fields, and advanced features are also easily accessible.

Made with love and pride

Hestia is open source software created by passionate people from all over the world. This means that the code is reviewed by multiple people, and everyone can contribute to it!

Extensible and powerful!

Hestia is extensible, yet easy to learn. You can create your own themes, web templates, quick-install apps, and interact with them using third-party software via the API.

Community-powered development

Hestia has a great support community - join the forum for discussions at https://forum.hestiacp.com !

Control Panel Key Features
