

Actions confirmation

Confirmation of potentially dangerous activities.

This option protects your servers from accidental clicking on buttons such as Power off, Restart, and Disconnect Network. This is implemented using a pop-up window where you want to confirm the above actions by clicking on the "OK" or "Cancel" button

Installing the OS

Also, to perform actions such as reinstalling the operating system on the server or canceling the server, additional confirmation is provided using a secret code that will be sent by e-mail, SMS or Telegram of your choice.

Settings

You can select the channel to receive the code in the settings, "Security" tab - "Actions confirmation ". After receiving the code, enter it in the required field and click "Confirm".
