Cost of VPS resources

The tariff structure of a virtual server depends on the amount of resources used - the number of processor cores, the amount of RAM, and the amount of SSD and HDD disk. For transparency in understanding pricing, the cost of each of these components is listed below.

- 1 processor core - $ 2.75 / month
- 1 Gb of RAM - $ 1 / month.
- 10 Gb SSD drive - $ 1 / month.
- 100Gb HDD drive - $ 2.5 / month.

Based on the selected configuration and the above prices, you get the total cost of renting a virtual server per month.
